

name

Fred and Freda were writing up the experiment, Fred wrote full sentences but muddled up the letters ... some words; Freda had used the correctly spelled words in a word search. Can you give the proper spelling for the the mixed up letters then find the same words in the word search?

Rock salt is a mixture of DANS and TALS. Salt is BULLOSE in water; sand will not VOLSLISED in water.

The CRACKLOTS is stirred with RETAW so the salt goes into SUNILOOT and the sand remains as a SIPSUNOSEN. The murky MUXITER is separated by GRILFEINT, the sand remains as a EDURISE in the FLITER PREAP while the salt solution passes through.

The liquid is DAWMER in an GRAVOTAPRINE basin so the water SEPAROTAVE and white CRASSYLT of RUPE sodium chloride are left in the HIDS.
